

NIDS Deployment & Installation Guide

Standard Operational Procedures for Docker and Local Execution | Generated: 2026-07-28

1. Local Setup Procedures

Run `setup.ps1` (Windows) or `setup.sh` (Linux/macOS) to provision `.venv`, install dependencies, and execute environment verification checks.

2. Docker Containerization

Run `'docker compose up -d --build'` to deploy backend, frontend, Prometheus, and Grafana containers.

3. Health Check & Validation

Execute `'python scripts/check_environment.py'` to verify system RAM, disk space, open ports, and model artifacts.
